

TO THE OFFICE OF THE PRESIDENT OF ANKARA MEDICAL CHAMBER

I have re-examined the file of Erol Zavar subject to your letter of 27 July 2005 No 2333/05.

- 1) His previous bladder Tm TUR revealed pathological indications of transitional cell carcinoma, WHO Grade 2.
- 2) His latest operation notes indicate that a cold biopsy of the tumour in the bladder was taken, and a TUR was carried out on the two foci on the posterior wall. Since the samples taken from the bladder were small no statement was made about the muscle tissue and the development of the tumour, and it was not indicated where intra-cavitary treatment was carried out or not.
- 3) The patient should be monitored at three month intervals and treatment administered in the light of findings
